Redcare GSM awarded top prize in **OSS Security's** benchmark testing

“We decided to put Redcare GSM to the test and it was by far and away the winner, in terms of reliability and protection.”

Julian Davies,
Director, OSS Security

OSS Security has been recommending Redcare GSM for over 10 years and felt it was time to review and benchmark against other products in the market, to ensure their customers were getting the best solution.

Julian Davies, Director at OSS Security says, “We decided to put Redcare GSM to the test and it was by far and away the winner, in terms of reliability and protection.”

OSS Security doesn't have any hesitation in making a Grade 4 service their standard recommendation to their customers. Julian continues, “It's all about understanding the mindset of your customers. It is important to our customers that their businesses, homes and assets are protected well and they appreciate high quality and good value solutions. So, like us, they're really not interested in buying second-best just to save a few pounds. It just doesn't make good economic sense. Not even in these cost conscious times.”

Having used Redcare GSM for a number of years, OSS Security wanted to ensure it was still the best product in the market for their customers. Redcare GSM came out top of the class when benchmarked against competitive products for reliability, level of protection and value for money. Julian says, “Following our product review and testing, Redcare GSM will continue to be the only recommendation to our customers.” OSS Security, based in Liverpool, is recognised as one of the fastest growing privately owned companies within the security industry.

OSS Security provides a range of security solutions, throughout the UK, to a range of domestic and business customers including luxury hi-fi retailers, transport companies, multi-million pound houses and leading hotels.

Redcare GSM:

- Since its launch in 1999, more Redcare GSMs have been sold than any other dual path system in the UK
- Compliant with British and European Standards for Grade 4 Alarm Signalling
- The Redcare network has 99.999% availability
- Redcare's technology notifies of line cuts or faults in 40 seconds
